

Qualified Professional Inspector —Required for Compliance with Construction NPDES Permits

The Qualified Professional Inspector Program is designed to assist developers, contractors, and governmental agencies to comply with the National Pollutant Discharge Elimination System (NPDES) Stormwater General Permit for Construction by providing the training necessary to properly inspect erosion prevention and sediment control measures at construction sites and document inspections. This permit is required for all construction activities disturbing one or more acres of land.

The Qualified Professional Inspector Program is designed to train personnel to perform required inspections of construction site stormwater Best Management Practices.

The Construction General Permit, and local Construction Site Runoff Control Ordinances, require a Qualified Professional to inspect all stormwater control measures every seven (7) or fourteen (14) days (depending on the community) and within twenty-four (24) hours of a one-quarter (0.25) inch rain event.

Why are NPDES and QP important?

Sedimentation of eroded soil is one of the leading causes of water pollution and impacts to streams, lakes, and rivers. Sediment can accumulate in streams and rivers, block the flow of water and contribute to flooding. Controlling erosion and sediment from construction sites is necessary to ensure that construction activities do not contribute to sediment pollution and flooding in streams and rivers.

What is the Qualified Professional Inspector Program?

Training - A 1-day course offered twice per year.

Manual - A Qualified Professional Inspector Manual will be available for download from the Clark and Floyd County Soil and Water Conservation Districts. The manual will be provided at the training session.

Exam - An on-line or paper format exam can be taken with or without attending the training course. If the applicant does not pass the exam, attendance at the training session is required prior to re-taking the exam.

Registration or Licensure - Applicants who pass the test are eligible to obtain a Qualified Professional Inspector registration or license from the community prior to initiating inspections of construction site stormwater Best Management Practices.
